Surveillance Communications

As an industry, all maritime stakeholders need their own revolution in terms of how they detect and respond to the threats of cyberattacks on their vessels. With the safety of seafarers, the safety of the environment and the safety of the public at stake, it's critical that shipping companies take advantage of the latest technology to ensure that their ships are protected from potential cyberattacks. By doing so, they can help to ensure the safety of their crew members, the safety of the environment and the safety of the public.
